Summary

Java Backend Developer with 2+ years of experience building REST APIs and microservices using Java, Spring Boot, Spring Data JPA, Hibernate and PostgreSQL. Currently developing a Drools-based contract rules engine for a logistics platform at Sonata Software. Experienced in Spring Security, Docker, JUnit/Mockito testing, exception handling and debugging enterprise applications.

Technical Skills

Languages: Java, SQL
Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, MapStruct, Drools, REST APIs
Microservices and DevOps: Microservices, Eureka Service Discovery, API Gateway, Docker
Databases: PostgreSQL, MySQL
Testing and tools: JUnit, Mockito, Postman, Git, GitHub, VS Code

Professional Experience

Software Engineer, Sonata Software | July 2024 to Present

Logistics Contract Rules Management System | August 2025 to Present
Technologies: Java, Spring Boot, Spring Data JPA, Hibernate, Drools, PostgreSQL, REST APIs, JUnit, Mockito, Git

- Built backend services for a logistics platform that converts contract terms into configurable business rules using Drools.
- Developed REST APIs to create, validate and apply contract-based rules for logistics operations.
- Designed PostgreSQL entities and relationships, and wrote optimized queries for rule retrieval.
- Implemented validation and exception handling to manage rule conflicts and contract changes.
- Wrote unit tests with JUnit and Mockito and verified rules against real contract scenarios with the team.

Employee Self-Service (ESS) Portal | July 2024 to July 2025
Technologies: Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, REST APIs, JUnit, Git

- Developed and maintained Spring Boot backend functionality for a company-internal employee self-service portal.
- Built and integrated REST APIs and implemented business logic across application modules.
- Used JPA/Hibernate with PostgreSQL for persistence and data access.
- Debugged defects, troubleshot application issues and supported enhancements with development, testing and support teams.

Projects

Leave Management System | Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, Docker

- Developed REST APIs for employees, leave types, leave balances and leave requests, with apply, approve, reject and cancel logic.
- Validated leave dates, balances and manager relationships; used MapStruct for DTO mapping and a centralized @RestControllerAdvice exception handler.
- Added notifications for approval, rejection and cancellation events; tested with Postman and containerized with Docker.

Employee / User Management | Spring Boot, Spring Security, JPA, PostgreSQL, Docker, Eureka, API Gateway

- Developed User Service REST APIs with authentication and authorization using Spring Security.
- Configured Eureka for service discovery and API Gateway for routing; implemented service-to-service communication and centralized exception handling.
- Created Dockerfiles and ran the services as containers.

Bookstore Application | Java, Spring Boot, JPA, MySQL, Kafka

- Built REST endpoints to add, view, update and delete books.
- Modeled book entities and used Spring Data JPA repositories for persistence in MySQL.
- Structured the code into controller, service and repository layers, with validation and error handling.
- Integrated Apache Kafka to publish and consume events for book operations.
- Tested the APIs with Postman.

Event Management System | Java, Spring Boot, REST API, JPA, PostgreSQL

- Built RESTful services to create, view, update and delete events.
- Modeled event data with JPA entities and stored it in PostgreSQL.
- Structured the code into controller, service and repository layers, with validation and error handling.
- Tested the endpoints with Postman.

Education

B.E., Computer Science and Engineering | Srinivas Institute of Technology, Mangalore | 2019 to 2023 | CGPA 7.8
Languages: English, Kannada, Hindi, Tulu
